In vivo test

S.L.A. Surface

S.L.A. (Sandblasting with large grit and acid etching)

- Higher bone-to-implant contact
- Faster bone formation on the surface

Human osteoblast

- Well attached and proliferated human osteoblasts

SlimLine Characteristics

Unit: mm

One Body Design

- S.L.A. surface enables immediate or early loading.
- Mini ball (Ø1.8) & metal socket make denture production easy.
- Wide range of choice for prosthetic options

Mini Ball Type

IBS282010

Fix Type

IUS283010

SlimLine Characteristics

Unit: mm

Denture System

- Mini ball size (Ø1.8)
- Mini O-ring type denture socket
- Minimal-size denture socket
- Mini O-ring are replaceable.

Mini O-ring Retention Force

Angled Abutment

- Slanted implanting is possible with the combination of angled abutment (15°, 25°).
- Cement the final restoration onto the abutment.

Selecting direction is easy due to the Octa 45° rotation angles.

Tilting Angle

Up to ±15 degrees of tilting angles to accommodate the pathway of the implant.

Double Thread Design

- Increased thread height helps strengthen the initial stability.
- Double threading helps decrease the chair time of implantation.

Surgical Drill Sequence

Drilling Sequence Guide

· Final Drill: 1,000rpm / 30~45N·cm

Surgical Process

Implantation Process

Use the cap to start the implantation of the fixture. When the linkage between the cap and fixture deforms after reaching 5N·cm of tightening force, remove the disengaged cap and continue implantation using the MF tool in the surgical kit.

Fix Type Angled Abutment Cementation

Prosthetic Manual

Mini Ball Type Fixture

Chairside

SlimLine Mini Ball type fixture

Fixture installation

Produce the individual tray for denture impression.

Affix the impression coping on the mini ball type fixture.

Apply the impression material.

Take the final impression with the prepared individual tray.

Remove the tray from the patient's mouth.

Image of the set final impression (with impression coping)

Mini Ball analog

Labside

Insert analogs into the coping embedded in impression.

Create the master model.

Prosthetic Manual - Indirect

Indirect

Labside

Socket spacer

Fabrication of the denture with conventional method

Secure spaces for the female sockets.

Assemble the female sockets onto the ball analogs that are embedded in the master model.

Apply the resin to the secured area.

Position the denture on the master model and wait for it to set completely.

Female sockets are placed in the denture.

Polish the denture.
